

Goodnature®

X-1 mini

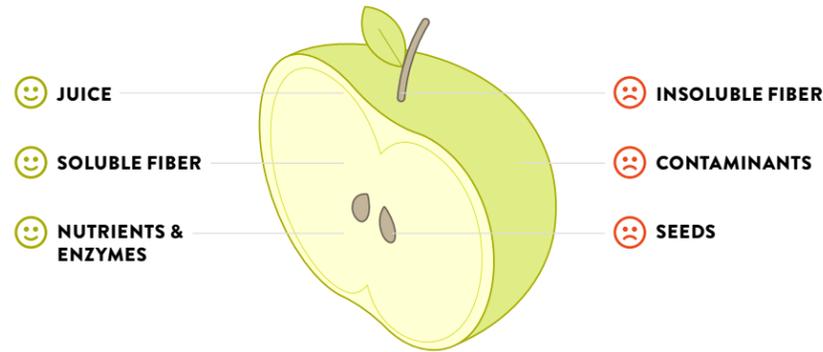

PATENT INFO: GOODNATURE.COM/PATENTS

WHY WE DRINK RAW JUICE

Juicing increases our consumption of raw fruit and vegetables, beyond what we consume by eating alone. **Juicing allows our body to absorb nutrients without overwhelming our system with large amounts of indigestible fiber.** Drinking juice can (and should be) enjoyable. Nature's vibrant flavors are fun and surprising.

WHAT'S IN A FRUIT/VEGETABLE? LET'S BREAK IT DOWN:

JUICE

Nutrients like vitamins and minerals, soluble fiber, living enzymes, phytonutrients, and natural sugars are all contained in the juice.

SOLUBLE FIBER

Soluble fiber is broken down in the body and is important in stabilizing blood sugar levels, lowering cholesterol, and promoting a healthy gut.

NUTRIENTS & ENZYMES

The ultimate goal of juicing is to consume as much of the nutrients and living enzymes as possible. This is the good stuff.

INSOLUBLE FIBER

The tough outer-walls of plant cells. Consuming too much insoluble fiber makes your digestive system work harder to absorb nutrients.

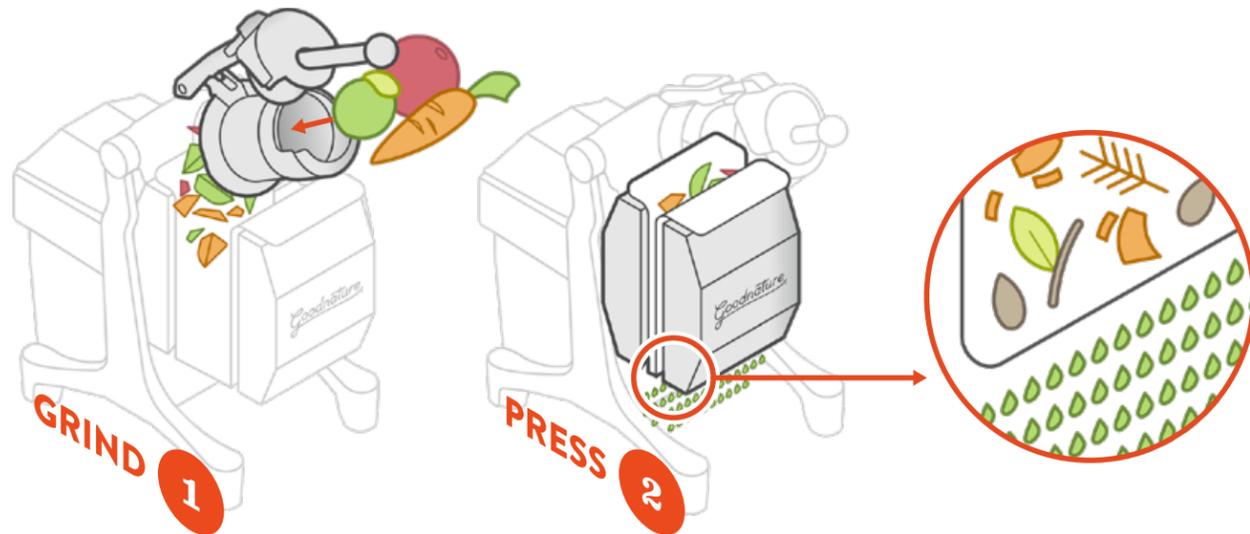

SEEDS

Particles of seeds shouldn't be consumed. They give a bitter taste to juice, and some actually contain trace amounts of arsenic.

CONTAMINANTS

The very outer layer of a fruit or vegetable often contains high levels of pesticides, wax, or preservatives (even on some organic produce).

HOW THE GOODNATURE JUICE PRESS WORKS

A genuine Goodnature cold-press is a two-step process. The plants are chopped in the grinder, then fall directly into the press for squeezing.

During the squeezing process, the fruit is not forced against a sharp screen like in other methods; it is entirely stationary — a gentle, natural process. After pressing, all of

the insoluble fiber including the skin, seeds, and stems are left behind in the Goodnature FreshFilter® press bag, which can be composted after use.

Goodnature juice is clean, smooth, consistent in color, contains no foam or chunks, and stays fresh for days.

Give your body maximum nutrients without the burden of the other stuff. Taste juice that's simple, raw, and memorable — the way nature intended.

Goodnature Juice

CLEAN & SMOOTH

All of the indigestible fiber including skin, seeds, and stems are removed, leaving you with sweet, flavorful juice.

LASTS FOR DAYS

Nutrients and taste are preserved for an extended period of time with the absence of heat, oxidation, and indigestible fiber.

BRIGHT & CONSISTENT

Patented process creates vibrant, colorful juice with minimal foam and separation.

Regular Juice

DOESN'T LAST LONG

Regular juice starts to separate within minutes of extraction.

FOAMY, PULPY & CHUNKY

High in solids with lots of indigestible fiber—resulting in a thicker and inconsistent mouth-feel.

BITTER

Taste can be bitter from the skins, seeds, and stem particles that make their way into the juice.

CUSTOMER SPOTLIGHT: JORDAN ROSENDALE, JK JUICES

Our mission is to provide Northwest Ohio with the highest quality juice possible, while also developing mutually beneficial relationships within the community.

Our juices are sourced with local organic farmers' produce. We have worked with the same farmers for 5 years now, and our relationship with them is particularly important to us - they provide us with the

freshest organic produce, allowing us to serve the best juice possible while supporting our local economy. Our decision to create a juice truck was about more than just serving juice - it's about making healthy options

available to those who never thought eating healthy could be delicious or easy. It's about inspiring people to find joy in being healthy, loving yourself and truly feeling alive!

We serve in a smaller community that, aside from JK Juices, has no other healthy food options. We filled a gap our community needed and was craving for. Over and over again we hear, "Thank you for providing this", "I appreciate what you do for our community", and many health success stories. We are so grateful to be the ones serving health to our city. We often say, "Health is applicable to everyone". At some point, we all want to choose health -- to choose life. Whether it's a daily choice or on a new diet, we are here for them. We are here for our community to serve them and help accomplish their health goals.

We focus on simplicity and transparency. Our product is simple; fruits and vegetables. Our process is simple; juice it, bottle it, serve it. Our menu is simple: 7 primary juices. Our customers want simple. They often feel eating healthy is complex and overwhelming. They say there are too many options on the market nowadays. Our customers value how simple it is to come to the juice truck and choose a healthy option made locally. Everything necessary - in a single bottle. We use a Goodnature press on our truck. Customers love seeing the juice made fresh right in front of them. They see value in the transparency and simplicity.

TRUE

Cold Pressed

TECH

A true cold-press is a two step process – cutting the fruit and vegetables to expand the plant cells, then gently, but firmly, applying enough pressure to extract all of the nutrient dense juice that nature has provided for us.

2ND

Generation

JUICING

Forty years after Dale Wettlaufer founded Goodnature, we are proud to announce our G2 Cold-Press System. With upgraded grinding and pressing innovations, you can now process a wider variety of fruit and veggies in the cleanest, safest, most efficient way possible.

X-1 Mini tackles the most common concerns of businesses ready to embark on the cold pressed journey.

Maximum
JUICE
— per —
DOLLAR

Our cold-press equipment extracts more juice from the produce, and cuts down on valuable labor time, meaning more juice for your hard earned dollars. Decrease waste, increase profit.

PLUG
— and —
PLAY

No assembly required. We understand the importance of commercial equipment being easy to set-up and get going. Simply unbox, plug it in, and start producing the best juice you've ever tasted. Runs on standard 110v electrical outlet.

→ ←
SMALL
Footprint

The X-1 Mini is a compact, all-in-one cold-press system. Small enough to fit neatly on a counter, you can now produce gallons of cold-pressed juice right in front of your customers in a beautiful way.

— A —
CLOSED
System

Our new G2 Cold-Press System has no dangerous pinch points and allows for minimal exposure to air, utilizing our closed pressing system. The safest and most sanitary juicing system available.

WHOLEFRUIT HOPPER

With a 4.3 inch wide mouth, there's no need to cut or peel most fruit and vegetables. Easily feed Herbivore® whole bunches of kale and whole apples.

ADAPTIVE PRESSING SYSTEM

Both the grinder and press intelligently adapt their speed or pressure to your recipe. Don't worry about changing blades or twisting knobs, simple one-button operation.

PRESSAFE INTERLOCKS

Grinder and press are fully enclosed while operating. This helps protect the juice from contamination and the operator from injury.

HERBIVORE® GRINDER

Our new patent pending grinder loves kale just as much as it loves apples, ginger, and even almonds, making it the most versatile grinder ever created.

FRESHFILTER® PRESS BAGS

Compostable, biodegradable press bags made from renewable resources. Limited use bags cut down on labor time and help protect your customers from foodborne illness.

PATENT INFO: GOODNATURE.COM/PATENTS

ELEGANT DESIGN

We partnered with Christopher Flechtner, world-famous designer of Slayer espresso machines to bring the market not only something functional, but beautiful.

CONTINUOUS DUTY

Finally a juicer that works as hard as you do. The X-1 Mini can be operated continuously without overheating or needing a break.

SELF CLEARING

Both the grinder and the press are designed to leave minimal residue behind. No need to rinse between most recipes.

COMPACT AND PORTABLE

Weighing just 150 pounds and running on normal 110v electricity, the X-1 Mini can be your favorite travel companion. Farmers markets, catering, and food trucks are now the perfect home for fresh juice.

WHISPER QUIET

The X-1 Mini is powered by air, not hydraulics, making it lighter, quieter, and safer than a hydraulic press. Run it in front-of-house without disturbing your customers.

EASY CLEANING

Disassemble the machine in seconds without the use of tools. All materials in the food zone are easily lifted out making deep cleaning a snap.
